Author:	Jelena Jevtovic
Event Title:	D3.5.2 Event report (Lisabon)
Event Date:	15 to 18 July 2018
Event Venue:	Instituto Superior Tecnico in Lisbon
Type of event: (National, international, press conference, promotional event etc.)	Study visit
Short description:	
<p>In the framework of realization of PoC projects and support to selected research teams from Serbia in raising TRL levels (act.3.5 and act.3.6), a visit to the Instituto Superior Tecnico in Lisbon took place in the period from 15 to 18 July 2018. On that occasion, the members of the project teams of the following PoC projects:</p> <ol style="list-style-type: none"> 1. Robust low-cost fiber-optic 2D deflection sensor, University of Novi Sad, Faculty of Technical Sciences 2. 3 PHASE voltage converter, University of Nis, Faculty of Electronic Engineering 3. Device for ultrasound washing and disinfection of medical instruments and vessels, University of Nis, Faculty of Electronic Engineering <p>had the opportunity to visit complementary laboratories and centres at the Instituto Superior Tecnico, to establish collaboration with their researchers and staff, as well as to learn about ways of protecting intellectual property and technology transfer, through several meetings held in:</p> <ol style="list-style-type: none"> 1. Intellectual Property Unit of the Technology Transfer Office of IST 2. INESC-ID, Instituto de Engenharia de Computadores e Sistemas em Lisboa 3. ISR institute 4. Civil Engineering Department and CERIS 5. DEEC and Telecommunications Institute <p>Participants from Serbia also had opportunity to develop value proposition of their PoC projects and to investigate commercial potential of their products/services/know-how proposed within PoC.</p> <p>During the visit, discussions with professor Jorge Proença from the Civil Engineering Department and CERIS and with professor Pedro Girão from the DEEC and Telecommunications Institute were realized as part of the agenda.</p> <p>The topic of the discussion Jorge Proença was the application in the real environmental conditions of the proposed sensor system within the PoC project entitled: Robust low-cost fiber-optic 2D deflection sensor. The participants also discussed about which commercial sensor could be replaced by the application of the proposed sensor system in the PoC project.</p>	

During the meeting with the professor Pedro Girão from the DEEC and Telecommunications Institute the participants had an opportunity to discuss on how to reduce the dominant errors that occur during fabrication and how to reduce the time required for the fabrication of the sensor proposed in the PoC project.

As part of the program, a workshop was realized on the topic of Value Proposition Design on the example of the PoC project: Robust low-cost fiber-optic 2D deflection sensor. The workshop addressed the problem of the fit between the value proposition and the most relevant customer segment. The goal is to find the most relevant features of the value proposition and understand how they can relieve the customer's pains and provide additional gains to the customer.

Apart from the activities related to the Act3.5 Improving TRL level through implementation of proof-of-concept programme for selected research ideas and Act3.6 IP valuation and commercialization strategy for selected research teams, an internal monitoring meeting was held (Act6.3 Internal project monitoring). The participants were Prof. Dr. Vesna Mandic (project coordinator) and the local project team of IST (Prof. Dr. Luis Caldas de Oliveira, IST Patricia Lima, IST). During the meeting, the realized activities at IST were analyzed and partner reporting was completed with the preparation of the Request for Payment for the transfer of the next grant installment based on the declared and justified costs to the Instituto Superior Tecnico.
